

// the.re-evaluation.crisis

A mark that changes on a recheck was never about the student.

It was about the marker. A short data story
from Indian exams this year. Swipe
through.

// one.case

01

40 → 99

A student in Karnataka scored 40 in a subject. He asked for a re-evaluation. The same answer sheet came back a 99. Nobody re-taught him. Only the marker changed.

02

**1.6 lakh students. 3.8
lakh answer books.**

This year, in Class XII alone, that many students paid CBSE to re-check their answer books. Re-checking a mark is no longer rare — it is a mass event.

03

4,632 / 9,111

In one batch of challenged scripts, more than half came back wrongly marked the first time — zero for correct answers, whole answers never read.

04

A recheck is just another tired human.

The problem is not effort. It is that high-stakes evaluation has never been reproducible or auditable. "Recheck harder" cannot fix a ruler that bends every time you use it.

// the.answer

So: who checks the evaluator?

The layer we are building — the same answer read the same way every time, every mark backed by evidence you can inspect, and a human as the final authority. Reproducible. Auditable. Human-final.
